

Dear Mike & Stella

Thank-you again for your warm hospitality and the amazing learning experience that was Waveform.

As you know I'm an "open-minded sceptic" and I really did wonder what I was letting myself in for. However initial discussions with yourselves and your reassurance that the course would be practical and humour orientated won me over to the point of attending.

I am now so pleased that I did.

To be honest it took me a while to catch on but mainly due to my own doubts and issues. As promised though the atmosphere was relaxed, progression was logical, took into account different learning speeds and very open and honest with discussions and questions from tutors, assistance and attendees.

On a personal level I have learnt to recognise, trust, organise and analyse information received via the system that is Waveform. However I can now also appreciate that is not easy to explain, but once experienced never forgotten. Also like most useful things it needs to be practiced and applied. I hope I do it justice and appreciate there is still so much to learn and sometimes wonder where it can't be used!

My Shiatsu has also improved and I am now an honest judge of when a treatment has been effective, which is often independently collaborated by the client. I'm still amazed by this and the sceptic in me I think will always continue to be, but I think it's good to question. I honestly feel that if I had not attended Waveform 1 and for the first time really felt and trusted the information I was receiving I would not have continued as a practitioner. With this in mind I'm looking forward to future courses as I feel it is now an important aspect of my continued personal development as a practitioner and as a person!

Thank you again for showing the DVD of the research and development work undertaken by yourself and other Martial Artists using Waveform. Good luck and I'm very interested on how it progresses.

Bye for now and please keep questioning, teaching and researching!

Best wishes

Jane Baldwin
